

DRUM BOX ADVANTAGE

WIRE & CABLE INVENTORY
MANAGEMENT
SOLUTIONS

Drum boxes are the inventory and storage solution you might not know you need.

While traditional wire and cable drums provide reliable, heavy-duty protection for your valuable wire inventory, they also introduce challenges for storage, inventory management and capital expenditures. Replacing drums with drum boxes can provide you with a more flexible, yet reliable, storage system for your wire inventory.

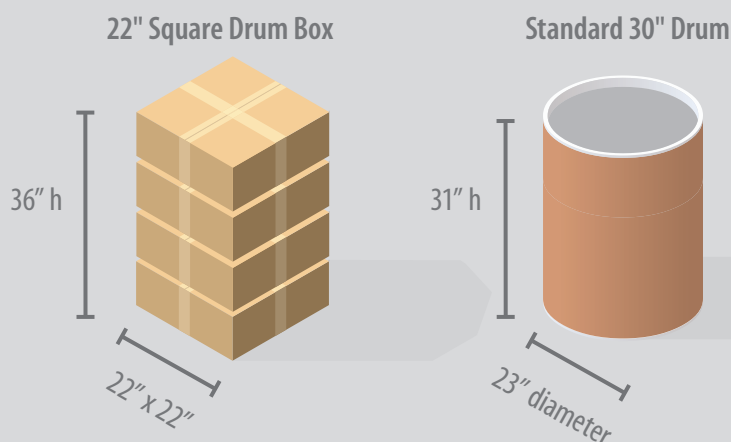

Advantages of drum boxes:

- More cost effective at lower quantities of wire than a traditional drum
- No need for full- or half-barrels of months' or even years' worth of material
- Smaller storage footprint: Stack four drum boxes in about the same space of one barrel (four 22" w x 22" d x 9" h boxes versus one 23" diameter x 30" h drum)
- 100% cardboard is easy to breakdown and recycle
- Lighter weight reduces shipping costs and makes handling easier for individuals
- Perfect for high-mix/low-volume wire usage

SIZED RIGHT FOR YOUR NEEDS: LESS SPACE & LOWER COST

Sized Right: Drum boxes reduce the amount of valuable floor space required for their much smaller footprint than traditional drums. Store more, different types of wire in the space of one traditional barrel.

Priced Right: Order just the quantity you need — not the quantity to fill a drum — thus reducing capital required for inventory. Drum boxes cost a third less than traditional drums, reducing the overall out-of-pocket cost for an order of equivalent wire quantity.
